

ANALYSIS REPORT

Doc nr: AR_21MO002_FP

SUMMARY:

This analysis report has been prepared by Folium Biosciences Europe analytical department.

PROCEDURE:

Identification and quantification of cannabinoids has been performed via HPLC analysis according to Folium Biosciences Europe analytical methods. The analysis of terpenes has been carried out via GC-FID.

Samples are analysed in duplicate.

The data is reported when the duplicate analysis showed that:

- the 6 standards used in the sequence have a RSD% <2%
- the main component has a RSD% <5%
- other components to be quantified have a RSD% <10%

PRODUCT INFORMATION:

Client: Vitaa B.V.	Batch: 21MO002
Sample name: 3% Broad Spectrum CBD in Hempseed/Grapeseed oil - natural flavour	Sample type: oil
Analysis date: 06 January 2021	Analysis code: 21MO002_FP

CANNABINOID PROFILE RESULTS:

Cannabinoid	Result
CBD	3,11 %
Δ -9THC	n.d.
Δ -8THC	n.d.
THCA	n.d.
CBDA	n.d.
CBG	n.d.
CBGA	n.d.
CBN	n.d.
CBC	n.d.
THCV	n.d.
CBDV	0,03 %

Note: n.d. = not detected
